Year 10 Subject Change
Date for Distribution: 12 May 2016

Dear Parents of Students who selected Automotive Studies for 2016

This is to notify you that the Automotive Studies course originally offered in 2015 will not be run in 2016. In its place, the College is offering a Materials and Technology: Wood course. Materials and Technologies actively engages students in creating quality designed solutions for an identified need. Students manage wood-based projects independently and collaboratively from conception to realisation. They apply design and systems thinking and design processes to investigate ideas, generate and refine ideas, plan, produce and evaluate designed solutions.

This new offering will prepare students who are considering studying Design and Technology – Materials Technology - Wood at SACE level.

Students who selected the former Automotive Studies course have been provisionally enrolled into the new Materials and Technology: Wood course. However, if any student feels that they would prefer to select a different elective, they are asked to see Ms Melanie Scott or Mrs Belinda Delyster as soon as possible.

We apologise if this change causes any inconvenience but we are confident that the new offering will provide similar valuable technical skills and training for students and more effective preparation for later SACE pathways.

Please do not hesitate to contact Mrs Delyster, Ms Scott or me if you have any queries.

Yours sincerely

Andrew Panozzo
Deputy Principal
