BYOD Device Specifications – Print and take to store

Devices should contain the following minimum specifications:

- Operating System must be Windows 10/11
- 4GB RAM Minimum (8GB Preferred)
    - Required for Office and Adobe products
- 5+ hour battery life
    - Most modern devices include 'all-day batteries' to allow a student to work without recharging
- Solid State Drive (SSD) – Minimum size 128GB
    - A solid state hard drive uses the same type of technology as USB sticks. It has no spinning disk and no moving parts, thus saving power and reducing the risk of crashed hard drives when devices are moved around when powered on.
- 3 Year Warranty
    - Warranty for retail devices is generally 1 year 'return to manufacturer' and could involve several weeks of delay. A warranty upgrade to 3 years should be considered, and the possibility of onsite warranty option should be explored.
- The College wireless network supports all models of wireless cards.
- Function to 'restore to factory defaults'
